

Oper tape clear

Transparent surgical tape

Transparent easy-to-use surgical tape

Transparent microperforated polyethylene surgical tape with hypoallergenic acrylic adhesive

Indications

- Securing dressings and first aid material.
- Securing cannulas, probes and catheters.
- Securing dressings on body parts in movement.
- Visualisation of measuring probes.

Elastic adhesive tape

The perforated polyethylene film gives this adhesive tape a degree of elasticity suitable for securing to mobile body parts.

Transparent plastic tape

Transparency makes positioning easier and allows for permanent vigilance.

Highly porous adhesive tape

Its high porosity helps to maintain the integrity of the skin.

Thanks to an advanced production process, Oper tape clear adhesive is applied to polyethylene film, providing high permeability to oxygen and steam.

Waterproof

The polyethylene film and acrylic adhesive are waterproof, so the patient can shower without risk of the adhesive tape falling off.

Easy to use

For the patient

The hypoallergenic acrylic adhesive can be removed easily without trauma and without leaving residue. It does not contain latex.

For healthcare personnel

The acrylic adhesive is sensitive to pressure and can be gently adhered; adhesiveness increases over time.

The transparent microperforated polyethylene film can be easily torn in both directions, enabling simple and safe application. It can be cut without using scissors.

Oper tape clear wide range of sizes enables any compress size to be covered in a single application, thereby facilitating hospital personnel's work.

Composition: PE film and acrylic adhesive.

Technical characteristics

Support	100% polyethylene film	Adhesiveness	350 - 1,250 g / 25 mm
Thickness	134 ± 182 µm	Adhesiveness on the back	100 - 200 g / 25 mm
Self-adhesive material	Adhesive film	Permeability (MVTR)	3,900 ± 20% g · m ⁻² · 24 h ⁻¹ at 37 °C
